

Sustainable & Durable Building in Wood

Nachhaltige und langlebige Bauten in Holz

Bâtiments en bois, soutenable, durables

Sustainable and durable buildings in wood

Ir. Edwin Smit
M3 Architekten
Rijswijk, Niederlande

ACT GREEN !

In a world where greentalking & greenwashing have become marketing tools, we would like to call for genuine sustainable practise of profession.

FREE YOUR MIND !

From your daily professional routine, that is. Take the time to reflect & think about the most important issues to your own standards in order to do your job in a social relevant way. Independent as loveable rogues.

TOWARDS A SUSTAINABLE SOCIETY !

According to the European Council's policy, the ultimate goal is a sustainable society, where production today will not cause lack of commodities tomorrow. Building with renewable sources represents the largest potential to reach that goal.

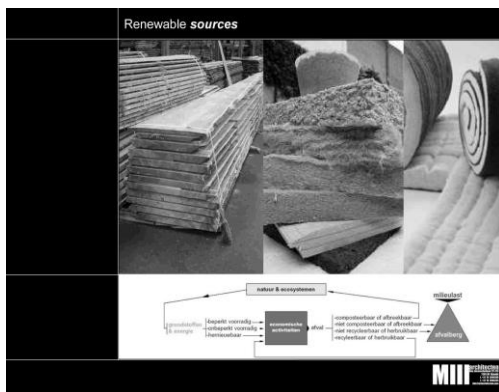

RESPECT FUTURE GENERATIONS !

Let our inheritors have the possibilities to provide their needs & not leave the environment raided.

RESPECT PLANET EARTH !

Be sensible & produce in respectful regard to ecological balance.

USE RENEWABLE SOURCES !

Building materials & products made from regrowable sources within the economical lifespan of the building are the best choice.

Wood is therefore the best choice as construction material.

GROWTH OF WOOD IS GOOD FOR OUR PLANET !

Because of the photosynthesis by the treeleaves, the growth of wood is of excellent value for the global environment.

IT'S ALL ABOUT NATURAL BALANCE !

All natural, industrial, domestic & mobility-related production of CO₂ & the regenerating to C & O₂ by the forests has to be well balanced.

THE PHENOMENON LOOKS LIKE THIS !

An Oxygen-element, a Carbon-element & another Oxygen-element.

CARBON-DIOXYDE, DANGER OR BLESSING ?

WOOD !

The only CO₂ absorbing building material for structural use is: wood.

LET IT GROW ! TO CUT IT DOWN !

Preferably from small seedling to outgrown tree, ready for logging. In order to make space for a new seedling to produce C & O₂ during its growth.

SUSTAINABLE LOGGING !

Apparently, the logging has to be done in a responsible way. Leaving the forest healthy & alive.

NATURAL BEAUTY !

MANY APPLICATIONS IN CONSTRUCTION !

TO ACHIEVE ARTIFICIAL EXTENSION OF THE
NATURAL BEAUTY !

LET'S ORGANIZE !

We initiated the first cooperation in the Dutch building industry to elaborate a highly sustainable build method by means of inter-disciplinary development of all components.

PRINCIPLES !

We optimized the balance between sustainability, healthiness indoor climate & commerce.

Because we are convinced of the fact that sustainability becomes accessible for the big crowd, only if it will just be another option in the market.

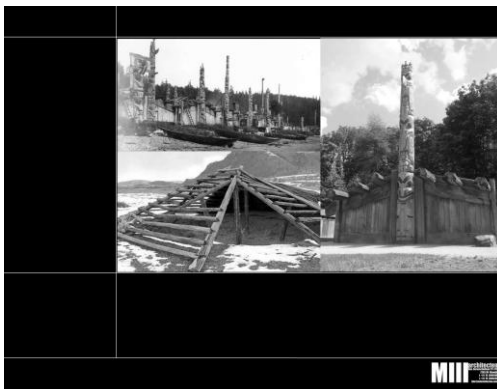

Uitgangspunten :
 Duurzaam Gezond Commercieel

Uitkomst van onderzoek 2004:
 Respecteer commercie. Zorg dat een duurzame, gezonde woning voor een lagere prijs te koop is dan elk regulier alternatief. Haalbaarheid doelstelling d.m.v. methodische herontwikkeling bouwcomponenten.

PRINCIPLES !

We optimized the balance between sustainability, healthiness indoor climate & commerce.

Because we are convinced of the fact that sustainability becomes accessible for the big crowd, only if it will just be another option in the market.

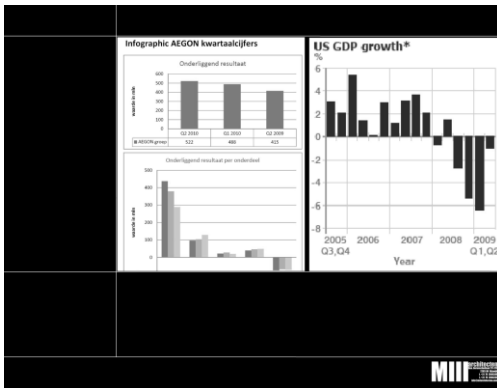

NOTHING NEW ABOUT C2C CONTENT !

Documentation shows that native Canadians already did it: C2C production in biosphere. Because they managed the sources in their surroundings thinking 7 generations forward stockwise. Now that's long term policy!

NOTHING NEW ABOUT C2C CONTENT !

Documentation shows that native Canadians already did it: C2C production in biosphere. Because they managed the sources in their surroundings thinking 7 generations forward stockwise. Now that's long term policy!

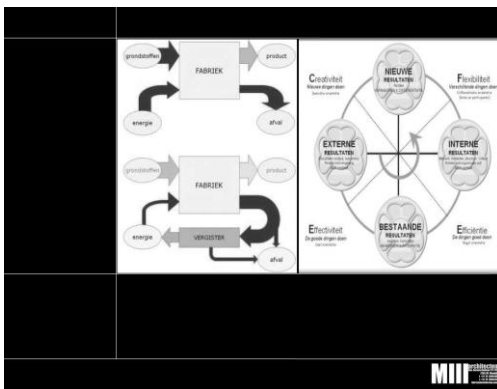

ADD HEALTHY ECONOMICAL BENEFITS TODAY !

Look a little bit further than quarterly profit & loss accounts when it comes to defining business strategy.

ADD HEALTHY ECONOMICAL BENEFITS TODAY !

Look a little bit further than quarterly profit & loss accounts when it comes to defining business strategy.

CONNECT KNOWLEDGE & COOPERATE !

To quit the idea that sustainable production is a cost-raising industry, inter-disciplinary collaboration is a vital principle for an integrated process.

CONNECT KNOWLEDGE & COOPERATE !

To quit the idea that sustainable production is a cost-raising industry, inter-disciplinary collaboration is a vital principle for an integrated process.

C2C PRODUCT & HEALTHY INDOOR CLIMATE FOR LESS !
 Consistent build method & unlimited freedom in design possibilities.

IN HOUSING PROJECTS.

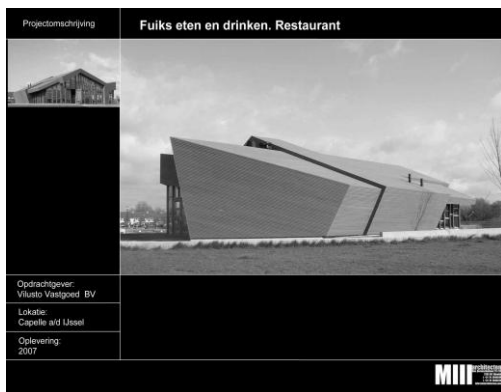

CONVENTION AUDITORIES.

ENVIRONMENTAL EDUCATION BUILDINGS.

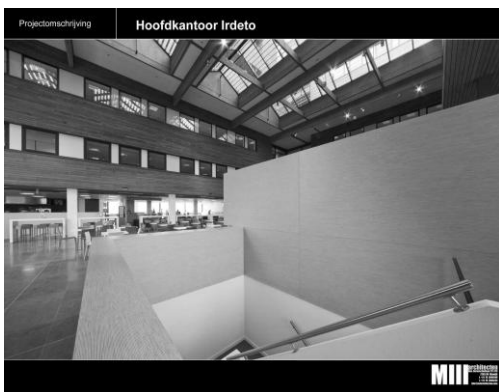

RESTAURANTS.

RENTAL OFFICE SPACE.

AND PUBLIC PAVILIONS.
